

SERVER SECURITY

SECURE YOUR DATA

PC Matic Pro Server Security has been specifically engineered to keep servers protected in a world full of malicious threats and actors that want access. Servers are home to your most valuable and business critical information and Server Security incorporates

more lockdown capabilities and alerting to ensure you're always secure and aware. With a default-deny approach, our whitelist based protection stops unknown applications from running, keeping your server limited to only running what is known good.

BUSINESS CRITICAL SECURITY

DEVICE CONTROL

With Device Control, you can easily disable removable storage capabilities to thwart potential malicious actors from stealing private files and data right inside your building.

UPTIME ALERTS

Making sure your server is always online for you or your customers is vital to business. If your server goes offline for any reason we'll immediately notify you over SMS or Email.

MAINTENANCE MODE

Server maintenance will cause alerts to kick off faster than you can check them; with PC Matic Server Security you can silence those alerts while you're performing scheduled maintenance.

MALWARE ANALYSIS

Servers can be the lifeblood of your business, with priority analysis any unknown applications stopped from running will receive categorization from our team within an hour.
